

## A2F Fixed Displacement pump/ motor (1~5 Serier)

### Descriptics:

Axial tapered piston unit of bent axis design with fixed displacement, for use as either pump or motor in hydrostatic drives, in open or closed circuit system. When operated as a pump, the flow is proportional to the drive speed and the displacement. When operated as motor, the output speed is proportional to the flow and inversely proportional to the displacement. The output torque increases with the pressure drop between the high and low pressure sides.

### Character:

Self-centering spherical control area allows torque-free cylinder bearing.  
Low peripheral speed and high efficiency.  
Drive shaft capable of accepting radial loading.  
Low noise level.

### A2F Series 1~4 (Size 10~225) Section

# A2F Fixed Displacement pump/ motor (1~5 Serier)

## Type Code

**A2F 55 R 2 P 1**

Type	
Fixed displacement pump/motor	A2F

## Ordering Example:

A2F、55、R、2、P、1

Fixed displacement pump A2F, Size 55,  
clockwise rotation, series 2, keyed shaft, port plate 1.

# A2F Series 5(Size 200~500) Section

1.	Oil Seal Kit	6.	Wash Spring
2.	Front cover	7.	Center pin
3.	Shaft	8.	Cylinder Block
4.	Retainer Plate	9.	Port Plate
5.	Pistion	10.	Spring

**NOTE:**

- To help ensure its longevity, please be careful to:
1. Keep the operating fluid clean anywhere.
  2. Change the hydraulic fluid periodically (Operation 1000~3000 hours or six months).

## Technical Data:

- Inlet Operating Pressure:
  - pump:
    - Minimum pressure at ports S, A or B:
      - Pabs \_\_\_\_\_ 0.08MPa
    - In close circuits, the pressure must be between 0.2MPa and 0.6 MPa, depending on pump speed and viscosity of hydraulic fluid.
  - Motor:
    - Pressure at ports A or B:
      - Nominal pressure \_\_\_\_\_ Pn=35MPa
      - Peak pressure \_\_\_\_\_ Pmax=40MPa
    - The sum of the pressure at ports A and B must not exceed 70MPa (individual pressure on either side max.40MPa)
- Outlet Operating Pressure:
  - pump:
    - Nominal pressure \_\_\_\_\_ Pn=35MPa
    - Peak pressure \_\_\_\_\_ Pmax=40MPa
- Maximum permissible case pressure(at port T):
  - Pabs \_\_\_\_\_ 0.2MPa
- Fluid Temperature Range: -25~80°C
- Viscosity Range:
  - t<sub>min</sub> \_\_\_\_\_ 10mm<sup>2</sup>/s
  - t<sub>max</sub> \_\_\_\_\_ (for short periods)1000 mm<sup>2</sup>/s
  - Optimum Operating Viscosity: \_\_\_\_\_ 16~25 mm<sup>2</sup>/s
  - Fluid Recommendation: 40 low-solidifying
- Filtration of Hydraulic Fluid:
  - Recommended filtration 10 μm. Coarser filtration of 25 to 40 μm is acceptable, However longer service life is achieved.
- Speed Range:
  - No limitation on minimum speed.
  - If high uniformity of rotation is required, n<sub>min</sub> should not be less than 50r/min. See table on page 5 for maximum speed.
- Mounting position:
  - Arbitrarily Choose. The housing must be filled with oil;
- Flow Direction
  - Clockwise:                      Anticlockwise
  - A to B                              B to A
  - S to B (Open Circuit)        S to A (Open Circuit)

### ● Calculation of Size:

#### ● pump:

Output Flow  $Q = \frac{V_g \times n \times \eta_v}{1000}$  [l/min]

Input Torque  $M = 0.159 \times V_g \times \Delta P / \eta_m$  [N·m]

Input Power  $P = \frac{Q \times \Delta P}{60 \times \eta_t}$  [Kw]

#### ● Motor:

Input Flow  $Q = \frac{V_g \times n}{1000 \times \eta_v}$  [l/min]

Output Speed  $n = \frac{Q \times 1000 \times \eta_v}{V_g}$  [r/min]

Output Torque  $M = 0.159 \times V_g \times \Delta P \times \eta_m$  [N·m]

Output Power  $P = \frac{Q \times \Delta P \times \eta_t}{60}$  [Kw]

$V_g =$ max geometric displacement	[ml/r]
$M =$ torque	[N·m]
$\Delta P =$ differential pressure	[MPa]
$n =$ speed	[r/min]
$\eta_v =$ volumetric efficiency	
$\eta_m =$ mechanical-hydraulic efficiency	
$\eta_t =$ overall efficiency

### Notes:

- These values are valid provided there is a absolute pressure at suction inlet S and when operated on mineral oil.

## Nomograph

Permissible speed  $n_{perm}$  can be determined from the nomograph. In motor operation the permissible speed for closed circuit system and boosted operation are also valid for open circuit system. When suction pressure  $P_{abs} > 0.1$ MPa, the permissible speed can be increased in open circuits (Self-suction operation). But when suction pressure  $p_{abs} < 0.1$ MPa, the permissible speed must be reduced.

# Unit Dimensions Series 1~4 size 10~160

## A2F6.1 Fixed Displacement Pump/Motor Section

### Descriptions:

A2F6.1 series is taper piston design, fixed displacement.

It is widely used for open and closed circuit as pump or motor in hydrostatic drive.

When operated as a pump, the flow is proportional to the drive speed and the displacement.

When operated as motor, the output speed is proportional to the flow and inversely proportional to the displacement.

### Character:

Housing angle is 40°. Compare with A2F 1~4 series. Displacement increase 52%, torque increase 70%, so power/weight high efficiency, and unit dimensions smaller.

Weight lighter than A2F 1~4 series.

### NOTE:

To help ensure its longevity, please be careful to:

1. Keep the operating fluid clean anywhere.
2. Change the hydraulic fluid periodically (Operation 1000~3000 hours or six months).

### ● Calculation of Size:

#### ● pump:

$$\text{Output Flow } Q = \frac{V_g \times n \times \eta_v}{1000} \quad [l/min]$$

$$\text{Input Torque } M = 0.159 \times V_g \times \Delta P / \eta_{mh} \quad [N \cdot m]$$

$$\text{Input Power } P = \frac{Q \times \Delta P}{60 \times \eta_t} \quad [Kw]$$

$V_g$  = max geometric displacement [ml/r]  
 $M$  = torque [N·m]  
 $\Delta P$  = differential pressure [MPa]  
 $n$  = speed [r/min]

#### ● Motor:

$$\text{Input Flow } Q = \frac{V_g \times n}{1000 \times \eta_v} \quad [l/min]$$

$$\text{Output Speed } n = \frac{Q \times 1000 \times \eta_v}{V_g} \quad [r/min]$$

$$\text{Output Torque } M = 0.159 \times V_g \times \Delta P \times \eta_{mh} \quad [N \cdot m]$$

$$\text{Output Power } P = \frac{Q \times \Delta P \times \eta_t}{60} \quad [Kw]$$

$\eta_v$  = volumetric efficiency  
 $\eta_{mh}$  = mechanical-hydraulic efficiency  
 $\eta_t$  = overall efficiency

## Standard

#### ● Inlet Operating Pressure:

##### ● pump:

Minimum pressure at ports S, A or B:

$P_{abs}$  ————— 0.08MPa

In close circuits, the pressure must be between 0.2MPa and 0.6 MPa, depending on pump speed and viscosity of hydraulic fluid.

##### ● Motor:

Pressure at ports A or B:

Shaft end A Splined shaft DIN5480

Nominal pressure —————  $P_n = 40MPa$

Peak pressure —————  $P_{max} = 45MPa$

Shaft end B Keyed shaft GB1096-79

Nominal pressure —————  $P_n = 35MPa$

Peak pressure —————  $P_{max} = 40MPa$

- Outlet Operating Pressure:
- Pump: Pressure at ports A or B  
Shaft end A Splined shaft DIN5480  
Nominal pressure——— Pn=40MPa  
Peak pressure———Pmax=45MPa  
Shaft end B Keyed shaft GB1096-79  
Nominal pressure——— Pn=35MPa  
Peak pressure———Pmax=40MPa

### Adaptation

- Inlet Operating Pressure:
- Pump: Minimum pressure at ports S、A or B  
Pabs ——— 0.08MPa  
In close circuits, the pressure must be between 0.2MPa and 0.6 MPa,depending on pump speed and viscosity of hydraulic fluid.
- Motor: Pressure at ports A or B  
Shaft end Z Splined shaft DIN5480  
Nominal pressure——— Pn=35MPa  
Peak pressure———Pmax=40MPa  
Shaft end P Keyed shaft GB1096-79  
Nominal pressure——— Pn=35MPa  
Peak pressure———Pmax=40MPa
- Outlet Operating Pressure:
- Pump: Pressure at ports A or B  
Shaft end Z Splined shaft DIN5480  
Nominal pressure——— Pn=35MPa  
Peak pressure———Pmax=40MPa  
Shaft end P Keyed shaft GB1096-79  
Nominal pressure——— Pn=35MPa  
Peak pressure———Pmax=40MPa

- Maximum permissible case pressure(at port T):  
Pabs ——— 1MPa
- Fluid Temperature Range: -25~80°C
- Viscosity Range:  
tmin ——— 10mm<sup>2</sup>/s  
tmax ——— (for short periods)1000 mm<sup>2</sup>/s  
Optimum Operating Viscosity:——— 16~25 mm<sup>2</sup>/s  
Fluid Recommendation: 40 low-solidifing
- Recommended filtration: 10μm.  
Coarser filtration of 25~40μm is acceptable,but with filtration of 10μm lotnger service life is obtained(reduced wear).
- Speed Range:  
No limitation on minimum speed;  
If high uniformity of rotation is required, n<sub>min</sub> should not be less than 50r/min. See table on page 5 for maximum speed.

### ● Mounting position:

Arbitrarily Choose.The housing must be filled with oil;

### ● Flow Direction

Clockwise:                      Anticlockwise:  
A to B                              B to A  
S to B                              S to A

(Open Circuit)                      (Open Circuit)

### ● Symbols:

### ● Nomograph

Permissible speed n<sub>perm</sub> can be determined from the nomograph.

Notes:

① The values given are valid for absolute pressure at suction inlet S and for operation on mineral oils.

② Calculated at 2% volumetric loss.

## Unit Dimensions

End plates 1~4 are used for motor and pump(closed circuit)

End plates 5、6 are used for pump(open circuit).Graph is clockwise rotation. for anti-clockwise,end plates 5、6 are rotation  $180^\circ$ .

## Shaft end

splined shaft A Nominated pressure  $P_n=40\text{MPa}$ , Peak pressure  $P_{max}=45\text{MPa}$ ;  
 Z Nominated pressure  $P_n=35\text{MPa}$ , Peak pressure  $P_{max}=40\text{MPa}$ ;

Keyed shaft B Nominated pressure  $P_n=35\text{MPa}$ , Peak pressure  $P_{max}=40\text{MPa}$ ;  
 P Nominated pressure  $P_n=35\text{MPa}$ , Peak pressure  $P_{max}=40\text{MPa}$ ;
